

introduces

description

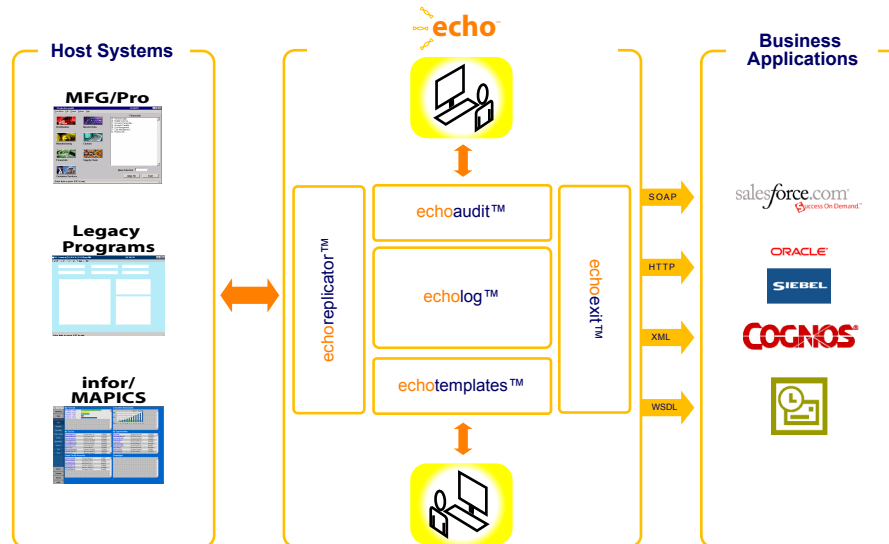

echo unleashes your business data from your Progress based system (such as MFG/PRO) and delivers it to any other business application including CRM (salesforce.com, Siebel CRM and Microsoft Dynamics) as well as PLM, HR, BI, and others. **echo** configurable and flexible database event-driven architecture powered by variety of pre-defined connectors (such as salesforce), templates (SMTP, CSV etc.) and applications (Replication, Data recovery, Audit Trail) will handle your entire interoperability and integration needs with low implementation and maintenance cost and with minimum coding.

features

- Wizard based selection of tables to be "echoed".
- End-to-end connectors for popular systems
- Multiple output templates and protocols to support your specific needs
- Incremental Log-based replication model minimizes amount of data transferred each time.
- Error handling and auditing capabilities
- Real-time or batch driven

advantages

- 100% accurate and up to date data visibility
- One point of integration and maintenance to all other systems
- Minimum coding-100% Progress based
- Various possible applications for integration, reporting, data recovery and audit trail.
- Easy Installation
- Lightweight integration architecture

professional services

Use manofIT integration expertise to:

- Customize our initial templates to your specific business needs, **echo** open source templates can be quickly extended.
- Develop specific applications for SQL-based reporting, data recovery and audit trail (also relevant for SOX compliance requirements)
- End-to-end Integration to almost any system with API or web-service capability, real-time or batch-driven with no file transfers
- Build inbound service-based transactions for updating MFG/PRO data.
